1 Introduction

1.1 Calendar - yearly scheduling

Untis Calendar - yearly planning is a timetable scheduling system specially designed to meet the following requirements:

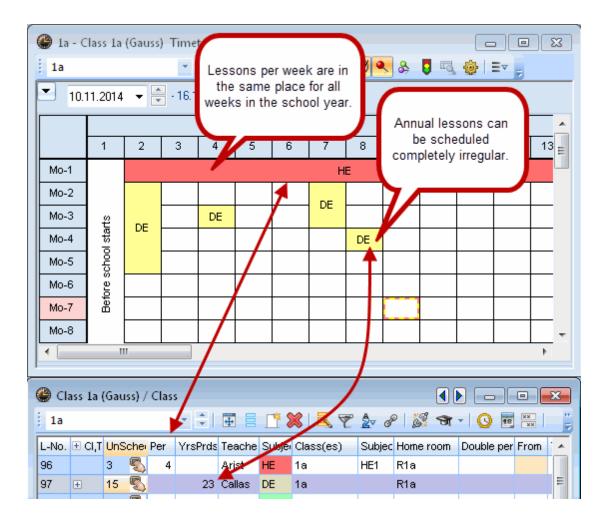

- · Scheduling yearly periods at unconnected times
- Blocking teachers at certain times.

2 General

2.1 Lessons

2.1.1 Yearly periods

The great advantage of working with the calendar module is that it allows you to deal with genuine *yearly periods*. In contrast to weekly periods, these yearly periods can be scheduled on completely unconnected dates.

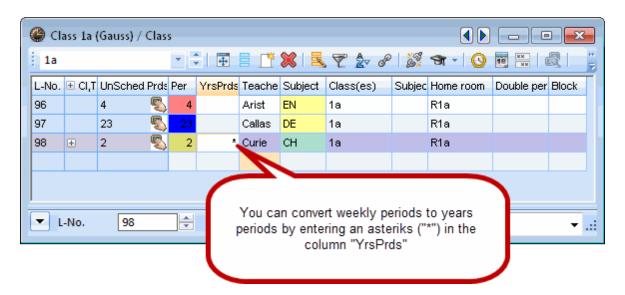

2.1.2 Yearly periods or weekly periods

Use weekly periods if the lessons in question are to be scheduled at the same time each week in the timetable and yearly periods if lessons are to be scheduled on an irregular basis.

Note:

You can convert weekly periods to yearly periods later on by entering a '*' in the 'YrsPrds' column.

The following prompt is displayed if some of the weekly periods have already been scheduled:

| Years periods | × |
|---|--------|
| Years periods | |
| Scheduled periods in the whole schoolyear: 37 Forecast (distributed und not-yet-distributed periods) for the whole schoolyear: 75 © Options - | |
| Convert the scheduled periods into years periods Convert the forecast (distributed und not-yet-distributed periods) into years periods | |
| ОК | Cancel |

Option 1: convert scheduled periods into weekly periods

4

If one period of a 2-period lesson has already been scheduled, this one weekly period will be converted into a number of yearly periods. In the example, this concerns 20 yearly periods, since the school year has 21 weeks including one week of holiday.

| | | | | | | | | | | | | | |
| • | L-No. | 8 | 9 | ÷ | | | | Class | * | | | • | .: |

Option 2: extrapolation - scheduled and unscheduled periods are converted to yearly periods.

This option results in 40 yearly periods; 20 have already been scheduled while a further 20 remain to be scheduled.

2.2 Calendar - yearly scheduling

2.2.1 Introduction

The heart of 'Calendar - Year Planning' is the window of the same name, which you can open via 'Modules | Calendar - yearly scheduling'. If you have already worked with Year's Planning in Terms the similarities in the windows will be obvious. The great advantage of calendar - yearly scheduling is that you do not need to create and work with terms.

The window is divided into two sections. Let's look at the display in the left section of the window, where you will see a list of all the lessons in the school.

You can hide or show details for each lesson such as lesson number, subject, class, number of students etc.

| 6 | -8 (| × | | 1 | 2 - 5 | 6 | 1 6 | ÷ | Ø - | | | | | | | | | | | | |

The white columns display the individual school weeks. A column shaded dark-orange indicates that all the days of the week in question lie within a holiday, while lighter shading indicates that some days of the week lie within a holiday.

Yearly periods can be allocated simply by entering them in the individual lesson weeks. By moving the mousre over a cell you get further information on the current lesson. In addition to how many periods are scheduled or not, you also get information on coloured cells, why they are coloured.

| 96 | Bio | 1a | Ander | R1a | | | NatW | 41 | | 0 | 41 | 0 | | | | | | | | | | | | |

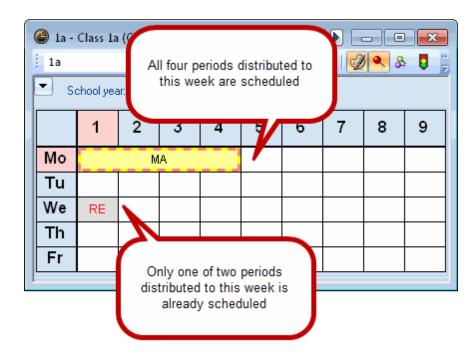

As a rule, the 'Calendar - Year Planning' window displays weekly lessons, yearly lessons and periodic lessons (lesson groups).

2.2.2 Allocating lessons to weeks

You can allocate yearly periods to different weeks by simply entering the number of periods that should be scheduled in a certain week into the relevant column.

Yellow shading indicates that not all periods which are *planned* for the week in question have actually been *scheduled* in the timetable.

2.2.3 Overview window

The right section of the calendar window provides an overview of the scheduled load for classes, teachers and students and the capacity utilisation of rooms in the individual school weeks.

The 'Ideal' column displays the (calculated) average value. Red shading in individual weekly columns indicates that elements are overutilised while green shading indicates spare capacity.

10

When allocating yearly periods to individual weeks automatically, the basic assumption is that all periods should be spread as evenly as possible over the school year. No assumptions are made concerning the capacity load of teachers, classes, rooms or students.

It is therefore essential that you enter weighting for allocating periods for the individual elements according to your requirements.

The possibilities for blocking certain weeks or lessons or for specifying minimum/maximum numbers of periods per week are essentially the same as those for year's planning in terms. For this reason, please refer to the chapter of that name for more details

Note: You can also open weighting to optimise calendar - yearly planning via 'Scheduling | Weighting'

2.2.4.2 Functions

2.2.4.2.1 Lock allocation

Use the <Lock allocation> function to permanently retain the period allocation you entered manually.

| | ol week ck distr | -1 Le: | | 19 — | | | | | | | | | | | | | | | | | |

2.2.4.2.5 Calendar sequences

Calendar sequences allow the option of specifying that certain lessons should be scheduled sequentially. Sometimes, for example, a theoretical lesson must have been given before the periods of practical instruction can be scheduled.

2.2.4.2.6 Minimum/maximum lessons

Use the 'min-max' field to define the minimum and maximum number of periods of a lesson that may be held in any one week.

2.2.4.2.7 Copy allocation of a week

In the calender window you can also select an entire column by clicking on its heading. Copy and paste and the allocation of a week is transferred to another week.

When you have selected a column you can also block the whole week by clicking n the -3 time request button.

Tip:

If you want to copy the allocation plus the timetable, go to the 'Data' tab and select 'Paste | Paste special'.

2.2.4.2.8 Restrictions and lesson grooups

When you work with restrictions coming from lesson groups or entries into the fields 'from-to', they are going to be highlighted with a colour.

2.2.5 Scheduling periods

2.2.5.1 Manual scheduling

Untis calendar scheduling provides a number of additional ways of scheduling periods in the timetable.

2.2.5.1.1 Calendar window --> timetable

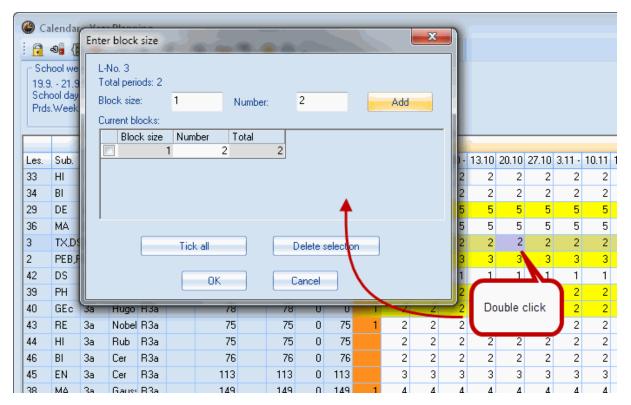

You can use drag&drop to place periods from the calendar window directly in the timetable. Please note that the initial click in the calendar window synchonisess the corresponding date in the timetable window.

2.2.5.1.2 Block sizes

.

The calendar - year planning window enables you to specify, by double-clicking in individual cells, the size of the blocks of periods in which the periods assigned to the relevant weeks are to be scheduled in the timetable.

2.2.5.1.3 Enter yearly periods in weekly timetable

You can also drag yearly periods directly into a (weekly) timetable from the lessons window

| | |

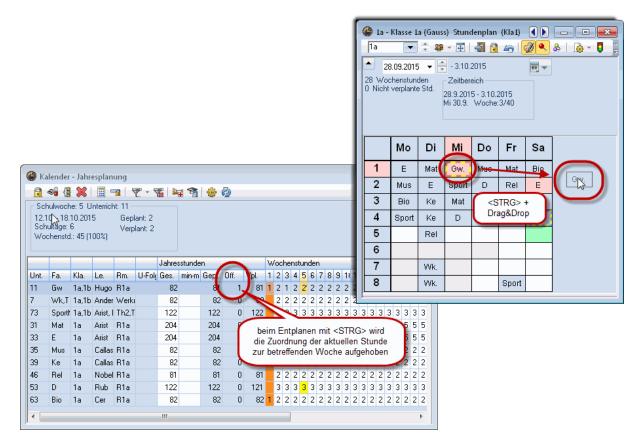

Use the time range setting in the timetable window to set the week in which you wish to schedule the period in question.

Note:

Unschedule via <CTRL>+Drag&Drop

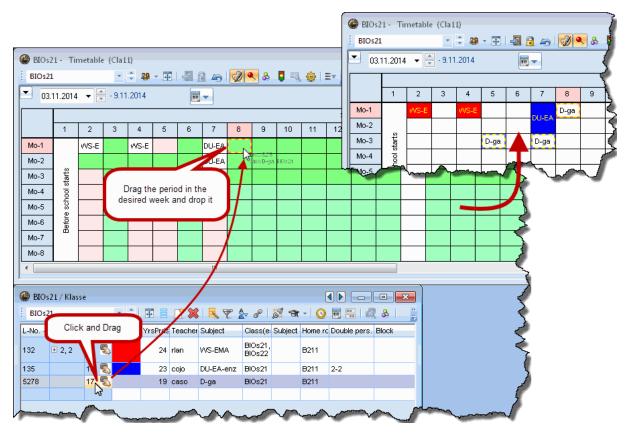

If you unschedule a yearly period in the timetable, this period is allocated to the current week in the 'Calender - Year Planning' window by default. By changing to another week in the timetable, the unscheduled period vanishes from the area of non-scheduled periods next to the timetable.

When unscheduling a period by <CTRL> + drag&drop, the allocation to this respective week is also cancelled. Thus it is very easy to shift one period from one week to another directly in the timetable.

2.2.5.1.4 Yearly periods in weekly overview

Entering yearly periods in the weekly overview You can also schedule yearly periods by dragging a lesson from a lessons window into a weekly summary timetable (format 11).

2.2.5.1.5 Yearly periods in scheduling dialogue

When working with yearly periods there are a few additional functions in the scheduling dialogue. In the selection list 'School week' you set the week you want to work on and you also see the number of scheduled periods of this week (regarding the source lesson).

2.2.5.2 Calendar absences

When performing long-term scheduling, the scheduling team must also bear in mind that some teachers will have other commitments on some days of the year. Timetable optimisation should take these days into account by not scheduling any lessons for the teachers in question on these days.

Untis calendar scheduling can take this into consideration by means of calendar absences .

2.2.5.2.1 How to enter absences

The calendar absences window is opened using the toolbar icon of the same name in the 'Calendar - Year Planning' window.

2.2.5.2.2 Warning messages

When you enter an absence of a teacher in the calender scheduling who at the respective time is already scheduled, a warning message will pop up from now on. Via this message you can either accept the situation as it is or let the obsolete periods be unscheduled.

2.2.5.3 Automatic scheduling (optimisation)

Once you launch optimisation via 'Scheduling | Optimisation' all (non-fixed) lesson periods will be scheduled automatically regardless of whether they are yearly or weekly periods.

Untis uses the following logic with regard to yearly periods:

- Allocated periods that have not been fixed in the calendar window will be reallocated
- Allocation criteria entered in the calendar window will be taken into account even if no periods have been entered in the calendar window (for example 'blocked' lessons)
- Calendar absences for classes and teachers will be fully taken into account

Below is a summary of all the icons that may be displayed in the 'Calendar - Year Planning' window:

| Scho 6.2 Schoo | 12.2.20 ⁻ I days: | : 1 Lesson: 12 | | uted: 0 | | | (T | fixed | tributior . The op ange thi | otimiz | ation | will no | | | | | | | scl | nedule pletely | optin | nizati bled | ked. Th ion is for this | | J | | | |

2.2.5.4 Diagnosis

There are special diagnosis features for working with yearly periods. The diagramme below shows, for instance, that teacher Hugo is absent on 5 October all day. However, he is scheduled for 4 periods this day.
